

YAGUAR FREIGHT FORWARDING ERP

From the first enquiry to the final invoice, in one place.

Quotes, jobs, bills of lading, customs, trucking, warehouse, containers, tax invoices and accounts for freight forwarders in Saudi Arabia. Built by Mahadhi Technologies.

1 system

Bonded warehouse

Cargo insurance

ZATCA e-invoicing

Customer portal

Every job, from quote to delivery

One file per shipment holds the parties, containers, charges, documents, trips, invoice and bills, so nobody asks a colleague where a job stands.

Enquiries and quotations

Log every request, price it from your rate cards, send a PDF, and turn the accepted quote into a job with its charges already booked.

Shipments and the job file

Sea, air and land work orders with filters, one-page job file, documents attached by category, and a timeline of everything that happened.

Bills of lading and air waybills

Draft, issue and release B/Ls and delivery orders. Air waybills check the airline number and work out chargeable weight and freight.

Customs clearance

Declarations with HS code, duty and VAT, permits and certificates, and status from draft to cleared. AI can suggest the HS code from the goods description.

Trucking and drivers

Trips with truck and driver checks (expired papers, double booking, over-capacity), distance and cost per km. Drivers update a trip from a phone link, no app to install.

Warehouse and containers

Bonded stock with daily rates, container movements from discharge to gate-out, and demurrage worked out and posted to the job automatically.

Cargo insurance

Issue certificates from your cover types and rates, and add the premium to the job as a charge.

Stuffing tally and QA

Tally what goes into each container, run a configurable QA checklist, and refuse to close it if the seal, the checks or the payload are not right.

No stock held.

The job file: parties, containers, charges, margin, documents, trips and invoice on one page.

- Sequential invoice numbers, 15% VAT with zero-rated and exempt services set by order type.
- ZATCA fields: QR code, hash chain, UBL XML and signing. Bilingual English and Arabic invoice PDF.
- PDF and email straight from the screen.

- Receipts and payments allocated to invoices and vendor bills, with ageing.
- Job matching: what you billed, what you were billed, what was paid and the margin, with a closing check.
- Vendor bill reading by AI: upload a PDF or photo and the form fills itself for a person to check.

Invoices, vendor bills, receipts and payments post to a double-entry ledger with a standard Saudi chart of accounts. Revenue accounts follow the charge; payables follow the vendor type. Costs wait in unbilled jobs until the job is invoiced.

Trial balance	Profit and loss
Balance sheet	VAT return worksheet
Customer statements	Vendor statements

Every report exports to PDF and Excel. Statements can be emailed to the customer.

Profit and loss - 01 Jan 2026 to 20 Oct 2026			Amounts in SAR
Revenue			
Account	Description	Amount	
4010	Ocean freight income, export		32,886.25
4020	Ocean freight income, import		74,477.50
4040	Trucking and haulage income		4,600.00
4050	Customs clearance fees		2,600.00
4060	Terminal and local charges recovered		6,720.00
4070	Documentation fees		950.00
4080	Container stuffing and QA tally income		2,000.00
Total Revenue			123,433.75
Cost of services			

Profit and loss, built from the ledger. Every report exports to PDF and Excel.

Be ready for ZATCA. The system produces the e-invoice data ZATCA phase 2 asks for. Onboarding your company with ZATCA (certificates and the compliance steps) is part of go-live, and we work through it with you.

Less chasing, fewer mistakes

Customer portal

Each customer signs in to see their own shipments with progress, shared documents, invoices and what is outstanding, quotations to accept or decline, a statement, and a form to ask for a quote.

Notices by email and WhatsApp

Tell customers when a container arrives, a bill of lading is released, an invoice is issued or cargo is delivered. Staff send them by hand, or switch on automatic notices. Each customer chooses how they hear from you.

Arabic and English

Switch the whole screen to Arabic with right-to-left layout. Invoices print in both languages.

AI where it saves time

- Paste a customer's email and the enquiry form fills itself.
- Suggested HS codes from the goods description.
- Vendor bills read from PDF or photo.

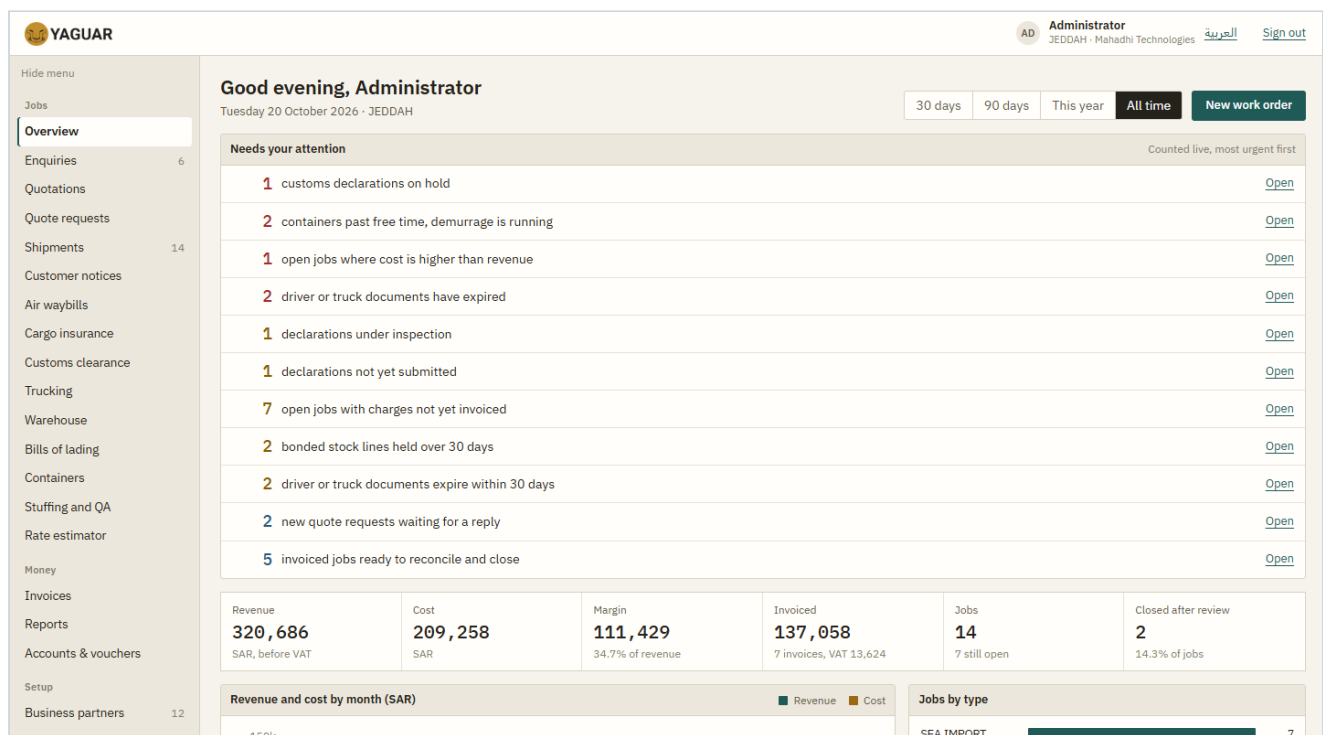

AI only suggests. A person checks and saves.

Excel in and out

Export any main list or report. Import partners and enquiries from a template, with a check before anything is saved.

Roles, audit and control

- Roles for forwarding, customs, dispatch, warehouse and accounts; each sees and does only what it should.
- A tamper-evident audit log of who changed what.
- Locations, services, VAT rates, covers, QA checks and more are lists you change yourself, no developer needed.

The overview: what needs attention today, revenue and cost, and where every job stands.

Live on your own setup, with your data

1

Configure

Company, VAT, bank details, branches, services, rates, users and roles.

2

Load

Import your customers and vendors from Excel, and set up your rate cards and chart of accounts.

3

Go live

Train the team, run a pilot on real jobs, then issue real tax invoices.

What you get

- Web application, works in any modern browser on desktop, tablet and phone.
- Hosted for you, or on your own server. Your data stays yours.
- Setup, training and support from the team that built it.
